

ABHISHEK KUMAR

Software Engineer — Frontend & AI-Powered Applications

+91-8439125152 | abhikumar0123252@gmail.com | Modinagar, Delhi NCR, India

[LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Software Engineer with 4+ years of experience building enterprise SaaS applications with React.js, Next.js, TypeScript, and FastAPI. Specialized in high-performance dashboards that render 5M–10M record datasets, and in production AI features — RAG pipelines, hybrid search with pgvector, and LLM chatbot integration on AWS Bedrock. Comfortable owning features end to end, from API design to frontend performance. Immediate joiner.

TECHNICAL SKILLS

Frontend: React.js, Next.js, TypeScript, JavaScript (ES6+), Redux Toolkit, Context API, Vite, Responsive Design

UI Libraries: shadcn/ui, Material UI (MUI), Ant Design, Chakra UI, Tailwind CSS

Backend: FastAPI, Python, REST API design, JWT/OAuth2 authentication

AI / LLM: RAG pipelines, hybrid search (semantic + keyword), pgvector, AWS Bedrock, LLM API integration, prompt engineering, MCP servers

Databases: PostgreSQL, pgvector, Redis

Visualization: AG Grid, D3.js, Vega-Lite, Chart.js

Performance: Code splitting, lazy loading, chunk-based data loading, list virtualization

Tools: Git, GitHub, CI/CD, Agile/Scrum, AI-assisted development (Claude Code, Copilot)

PROFESSIONAL EXPERIENCE

Software Engineer — VARAISYS PVT. LTD., Noida

Jun 2022 – Jun 2026

(Intern: Jan 2022 – May 2022)

- Engineered visualization systems rendering 5M–10M records smoothly in the browser using AG Grid, D3.js, and Vega-Lite with chunk-based loading and virtualization, cutting initial dashboard load time from ~15s to ~5s (66% faster).
- Led frontend development of the VRC (Visual Reliability Chart) product used by ~200 users, designing a reusable component architecture that accelerated delivery of new chart types and views.
- Built the MAT analytics platform end to end on the frontend — custom chart editor, reporting workflows, and CSV/PDF export — used by ~200 enterprise users.
- Reduced rendering latency and bundle size through code splitting, lazy loading, and memoized render paths across enterprise dashboards.
- Built annotation and interview-automation frontends for AI products (Annotator, APS, Quark9), including real-time labeling UIs consumed by ML training pipelines.

Software Engineer (Outsource, via VARAISYS) — Veryon — aviation software

Jan 2025 – Jan 2026

- Developed ALICE, an enterprise AI chatbot on AWS Bedrock with retrieval over confidential aviation maintenance datasets; built the full chat frontend and conversation workflows.
- Built a Global Search module in React + Vite + TypeScript, styled with Material UI components, and integrated it into a legacy .NET MVC codebase via iframe/.cshtml bridging — shipped to production across Veryon's enterprise aviation platform.

KEY PROJECTS

AI-Powered Dubai Business Assistant — RAG system (FastAPI, PostgreSQL + pgvector, LLM APIs)

- Designed a hybrid-search RAG pipeline combining structured database lookup, pgvector semantic retrieval, and live web search for grounded answers.
- Implemented conversational memory, personalized responses, file-based Q&A, and automated document-ingestion pipelines.
- Built the full stack: FastAPI backend services, retrieval orchestration, and the chat frontend.

Custom MCP Server with Authenticated Tooling (Python, FastAPI, FastMCP, JWT/OAuth2)

- Built an MCP server exposing FastAPI-backed tools to LLM clients (incl. Claude Desktop) over stdio and HTTP, secured with JWT/OAuth2 authentication.

EDUCATION

B.Tech, Information Technology — R.D. Engineering College, Ghaziabad

2018 – 2022

CERTIFICATIONS

Meta React • Gen AI: Beyond the Chatbot • GitHub Copilot • Claude Code
